Create a package "com".

Create class ArrayDemo with main method.

Write a static method findAverage which will take int array as input and will return average of all elements in the array. Declare array in main method and print the average as output.

Refer below class outline for reference. Ensure that the same is 100% followed.

```
com
ArrayDemo
    S main(String[]) : void
    S findAverage(int[]) : double

                    Press 'Ctrl+O' to show inherited members
